

MALLA REDDY COLLEGE OF ENGINEERING & TECHNOLOGY

(Autonomous Institution – UGC, Govt. of India)

DEPARTMENT OF COMPUTATIONAL INTELLIGENCE

REPORT ON CHANDAMAMA KATHALU DATATHON

17th NOV 2023

Timings for the Hackathon: 10 AM to 1 PM

Organizing body and Theme:

Swecha, the team behind the first Telugu Operating System and the first free Telugu font. An extensive glossary created by Swecha still serves as the base for Telugu keyboards we use in our daily lives. Continuing in the same spirit, Swecha has been working on building a Large Language Model (LLM) for Telugu. LLMs have become the starting point for building our own / indigenous AI applications in regional languages.

Swecha Team Invited MRCET institution to be a part of a datathon on the 17th of November. This datathon is intended to create a large corpus of Telugu stories - stories we have heard from our childhood - and create a digital repository. This corpus will be used to create the very first Telugu AI, capable of coming up with short stories.

This effort will be named Chandamama Kathalu - throwback to short stories told to kids instilling morals and ethics. Around 300 students from **COMPUTATIONAL INTELLIGENCE AND EMERGING TECHNOLOGIES** are participated in Datathon.
